Project Bazaar Day 1

- CALTOR TEAM
- EARL JEDRICK MACALINO
 - UMANGI PATEL
 - GLAIZA REGONAS
- [10th March, 2020]

SHIKSHA

The Planner

Project Deats

- What problem(s) are you trying to solve?
 - We are trying to upgrade the Grading Calculator and Academic Planner for Academic Transition Program in University of Regina.
- What gap are you filling?
 - Students who are in probation period must take transition program and for their easy use we are creating web application
- What innovation are you creating?
 - A web page that will act as a tool to help students keep track of their grades and plan for their future courses.

Constraints and Function Requirements

Functional requirements

- The Grading Calculator must be able to:
- Have user signup and log in same as u of r account
- Stores user's inputs (assignment grades, grades from previous classes)
- From those stored data be able to calculate the user's UGPA according the University of Regina standard
- Have those data and calculations saved when the user logs back in so that they don't have to keep entering their grades
- Have a different section for the Academic Transition Program class
- Be able to use by other students not just the ones in the program
- An academic plan that will help student plan out their future classes.

Constraints

- Users will need to enter their previous grades in order to determine their UGPA and store it in the database.
- Not free to design what we want; we must constantly meet with the stakeholders for them to approve every step we make.

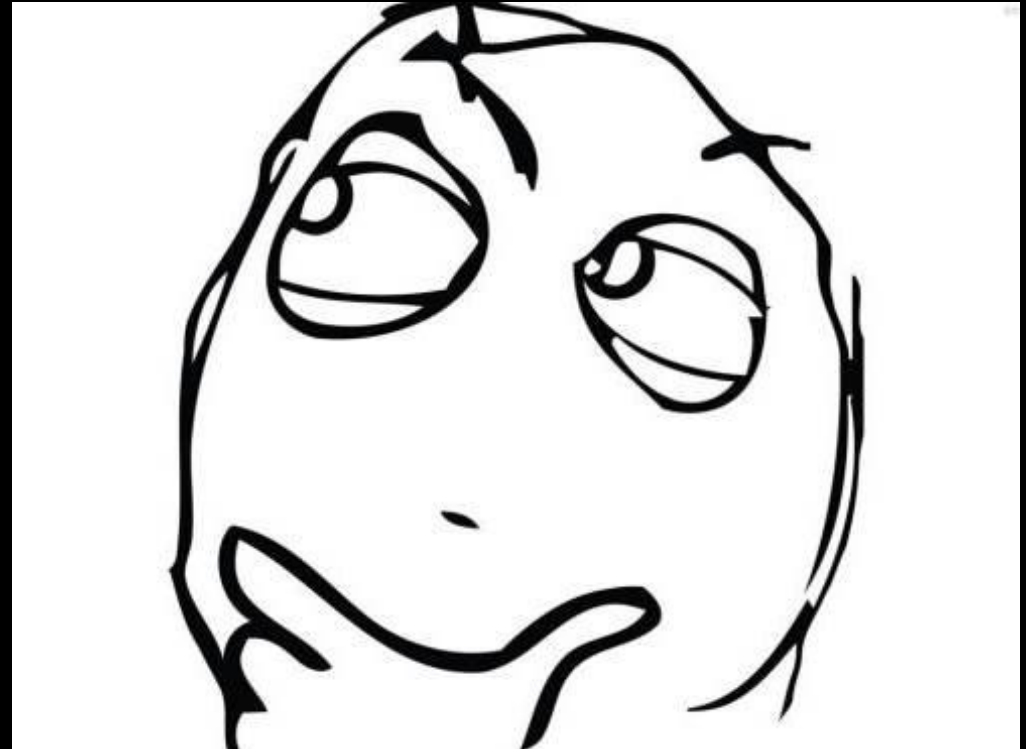

Demo and documentation

Documentation are uploaded on [GitHub](#)

Stories on board [Link](#)

Group reflection

- Do you feel you are on track?
 - No, we are not where we want to be.
- Do you feel there are barriers to your success (if any)?
 - Getting the front-end and back end put together
 - Getting the whole application into the server

Q/A
